

APPLICATION SYSTEMS USED BY IGRALUB

*Mobile spray equipment*

Flange lubrication

Railhead conditioning

*Producer:*

*Stationary lubrication systems*

Flange and railhead lubrication

Railhead conditioning

*Producer:*

*GPS control system for mobile spraying*

TOR is an independent electronic control. Because of location detection signals (GPS, control systems) TOR recognizes specified lubrication points before curves and rail points that are registered on a card, and passed on corresponding signals (direction, braking, speed, weather, time, etc.), are defined in spray commands. TOR meets the requirements for the treatment of the rail head and is successfully used for the rail head conditioning.
